

Bleve

Text Indexing for Go
1 February 2015

Marty Schoch

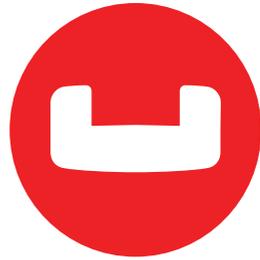

Say What?

blev-ee

bih-leev

Couchbase

- NoSQL Document Database
- Official Go SDK

Projects Using Go

- N1QL Query Language
- Secondary Indexing
- Cross Data-Center Replication

Why?

elasticsearch.

Lucene

- Lucene/Solr/Elasticsearch are awesome
- Could we build 50% of Lucene's text analysis, combine it with off-the-shelf KV stores and get something interesting?

Bleve Core Ideas

Text Analysis Pipeline

- We only have to build common core
- Users customize for domain/language through interfaces

Pluggable KV storage

- No custom file format
- Plug-in Bolt, LevelDB, ForestDB, etc

Search

- Make term search work
- Almost everything else built on top of that...

What is Search?

Simple Search

The Google logo is centered on the page, featuring its characteristic multi-colored letters: 'G' in blue, 'o' in red, 'o' in yellow, 'g' in blue, 'l' in green, and 'e' in red.A long, thin, empty search input field with a light gray border. On the right side of the field, there is a small, dark gray microphone icon, indicating a voice search feature.

Google Search

I'm Feeling Lucky

Paperback

Getting Started

Install bleve

go get [github.com/blevesearch/bleve/...](https://github.com/blevesearch/bleve/)

Import

```
10 import "github.com/blevesearch/bleve"
11
12 type Person struct {
13     Name string
14 }
15
16 func main() {
17     mapping := bleve.NewIndexMapping()
18     index, err := bleve.New("people.bleve", mapping)
19     if err != nil {
20         log.Fatal(err)
21     }
22
23     person := Person{"Marty Schoch"}
24     err = index.Index("m1", person)
25     if err != nil {
26         log.Fatal(err)
27     }
28     fmt.Println("Indexed Document")
29 }
```

Data Model

```
10 import "github.com/blevesearch/bleve"
11
12 type Person struct {
13     Name string
14 }
15
16 func main() {
17     mapping := bleve.NewIndexMapping()
18     index, err := bleve.New("people.bleve", mapping)
19     if err != nil {
20         log.Fatal(err)
21     }
22
23     person := Person{"Marty Schoch"}
24     err = index.Index("m1", person)
25     if err != nil {
26         log.Fatal(err)
27     }
28     fmt.Println("Indexed Document")
29 }
```

Index Mapping

```
10 import "github.com/blevesearch/bleve"
11
12 type Person struct {
13     Name string
14 }
15
16 func main() {
17     mapping := bleve.NewIndexMapping()
18     index, err := bleve.New("people.bleve", mapping)
19     if err != nil {
20         log.Fatal(err)
21     }
22
23     person := Person{"Marty Schoch"}
24     err = index.Index("m1", person)
25     if err != nil {
26         log.Fatal(err)
27     }
28     fmt.Println("Indexed Document")
29 }
```

Create a New Index

```
10 import "github.com/blevesearch/bleve"
11
12 type Person struct {
13     Name string
14 }
15
16 func main() {
17     mapping := bleve.NewIndexMapping()
18     index, err := bleve.New("people.bleve", mapping)
19     if err != nil {
20         log.Fatal(err)
21     }
22
23     person := Person{"Marty Schoch"}
24     err = index.Index("m1", person)
25     if err != nil {
26         log.Fatal(err)
27     }
28     fmt.Println("Indexed Document")
29 }
```

Index Data

```
10 import "github.com/blevesearch/bleve"
11
12 type Person struct {
13     Name string
14 }
15
16 func main() {
17     mapping := bleve.NewIndexMapping()
18     index, err := bleve.New("people.bleve", mapping)
19     if err != nil {
20         log.Fatal(err)
21     }
22
23     person := Person{"Marty Schoch"}
24     err = index.Index("m1", person)
25     if err != nil {
26         log.Fatal(err)
27     }
28     fmt.Println("Indexed Document")
29 }
```

Run

Open Index

```
15 func main() {
16     index, err := bleve.Open("people.bleve")
17     if err != nil {
18         log.Fatal(err)
19     }
20
21     query := bleve.NewTermQuery("marty")
22     request := bleve.NewSearchRequest(query)
23     result, err := index.Search(request)
24     if err != nil {
25         log.Fatal(err)
26     }
27     fmt.Println(result)
28 }
```

Build Query

```
15 func main() {
16     index, err := bleve.Open("people.bleve")
17     if err != nil {
18         log.Fatal(err)
19     }
20
21     query := bleve.NewTermQuery("marty")
22     request := bleve.NewSearchRequest(query)
23     result, err := index.Search(request)
24     if err != nil {
25         log.Fatal(err)
26     }
27     fmt.Println(result)
28 }
```

Build Request

```
15 func main() {
16     index, err := bleve.Open("people.bleve")
17     if err != nil {
18         log.Fatal(err)
19     }
20
21     query := bleve.NewTermQuery("marty")
22     request := bleve.NewSearchRequest(query)
23     result, err := index.Search(request)
24     if err != nil {
25         log.Fatal(err)
26     }
27     fmt.Println(result)
28 }
```

Search

```
15 func main() {
16     index, err := bleve.Open("people.bleve")
17     if err != nil {
18         log.Fatal(err)
19     }
20
21     query := bleve.NewTermQuery("marty")
22     request := bleve.NewSearchRequest(query)
23     result, err := index.Search(request)
24     if err != nil {
25         log.Fatal(err)
26     }
27     fmt.Println(result)
28 }
```

TZID:Europe-Brussels
DTSTART:20150201T140000
DTEND:20150201T144500
SUMMARY:bleve - text indexing for Go
DESCRIPTION: Nearly every application today has a search component. But delivering high quality search results requires a long list of text analysis and indexing techniques. With the bleve library, we bring advanced text indexing and search to your Go applications. In this talk we'll examine how the bleve library brings powerful text indexing and search capabilities to Go applications.
CLASS:PUBLIC

END:VEVENT
```

FOSDEM Event Data Structure

```
type Event struct {  
    UID          string    `json:"uid"`  
    Summary      string    `json:"summary"`  
    Description   string    `json:"description"`  
    Speaker      string    `json:"speaker"`  
    Location     string    `json:"location"`  
    Category     string    `json:"category"`  
    URL          string    `json:"url"`  
    Start        time.Time `json:"start"`  
    Duration     float64   `json:"duration"`  
}
```

Index FOSDEM Events

```
36     count := 0
37     batch := bleve.NewBatch()
38     for event := range parseEvents() {
39         batch.Index(event.UID, event)
40         if batch.Size() > 100 {
41             err := index.Batch(batch)
42             if err != nil {
43                 log.Fatal(err)
44             }
45             count += batch.Size()
46             batch = bleve.NewBatch()
47         }
48     }
49     if batch.Size() > 0 {
50         index.Batch(batch)
51         if err != nil {
52             log.Fatal(err)
53         }
54         count += batch.Size()
55     }
56     fmt.Printf("Indexed %d Events\n", count)
```

Run

Search FOSDEM Events

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     q := bleve.NewTermQuery("bleve")
19     req := bleve.NewSearchRequest(q)
20     req.Highlight = bleve.NewHighlightWithStyle("html")
21     req.Fields = []string{"summary", "speaker"}
22     res, err := index.Search(req)
23     if err != nil {
24         log.Fatal(err)
25     }
26     fmt.Println(res)
27 }
```

Run

Phrase Search

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     phrase := []string{"advanced", "text", "indexing"}
19     q := bleve.NewPhraseQuery(phrase, "description")
20     req := bleve.NewSearchRequest(q)
21     req.Highlight = bleve.NewHighlightWithStyle("html")
22     req.Fields = []string{"summary", "speaker"}
23     res, err := index.Search(req)
24     if err != nil {
25         log.Fatal(err)
26     }
27     fmt.Println(res)
28 }
```

Run

Combining Queries

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     tq1 := bleve.NewTermQuery("text")
19     tq2 := bleve.NewTermQuery("search")
20     q := bleve.NewConjunctionQuery([]bleve.Query{tq1, tq2})
21     req := bleve.NewSearchRequest(q)
22     req.Highlight = bleve.NewHighlightWithStyle("html")
23     req.Fields = []string{"summary", "speaker"}
24     res, err := index.Search(req)
25     if err != nil {
26         log.Fatal(err)
27     }
28     fmt.Println(res)
29 }
```

Run

Combining More Queries

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     tq1 := bleve.NewTermQuery("text")
19     tq2 := bleve.NewTermQuery("search")
20     tq3 := bleve.NewTermQuery("believe")
21     q := bleve.NewConjunctionQuery(
22         []bleve.Query{tq1, tq2, tq3})
23     req := bleve.NewSearchRequest(q)
24     req.Highlight = bleve.NewHighlightWithStyle("html")
25     req.Fields = []string{"summary", "speaker"}
26     res, err := index.Search(req)
27
28     if err != nil {
29         log.Fatal(err)
30     }
31     fmt.Println(res)
32 }
```

Run

Fuzzy Query

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     tq1 := bleve.NewTermQuery("text")
19     tq2 := bleve.NewTermQuery("search")
20     tq3 := bleve.NewFuzzyQuery("believe")
21     q := bleve.NewConjunctionQuery(
22         []bleve.Query{tq1, tq2, tq3})
23     req := bleve.NewSearchRequest(q)
24     req.Highlight = bleve.NewHighlightWithStyle("html")
25     req.Fields = []string{"summary", "speaker"}
26
27     res, err := index.Search(req)
28     if err != nil {
29         log.Fatal(err)
30     }
31     fmt.Println(res)
32 }
```

Run

Numeric Range Query

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     longTalk := 110.0
19     q := bleve.NewNumericRangeQuery(&longTalk, nil)
20     req := bleve.NewSearchRequest(q)
21     req.Highlight = bleve.NewHighlightWithStyle("html")
22     req.Fields = []string{"summary", "speaker", "duration"}
23     res, err := index.Search(req)
24     if err != nil {
25         log.Fatal(err)
26     }
27     fmt.Println(res)
28 }
```

Run

Date Range Query

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     lateSunday := "2015-02-01T17:30:00Z"
19     q := bleve.NewDateRangeQuery(&lateSunday, nil)
20     q.SetField("start")
21     req := bleve.NewSearchRequest(q)
22     req.Highlight = bleve.NewHighlightWithStyle("html")
23     req.Fields = []string{"summary", "speaker", "start"}
24
25     res, err := index.Search(req)
26     if err != nil {
27         log.Fatal(err)
28     }
29     fmt.Println(res)
30 }
```

Run

Query Strings

```
11 func main() {
12
13     index, err := bleve.Open("fosdem.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     qString := `+description:text `
19     qString += `summary:"text indexing" `
20     qString += `summary:believe~2 `
21     qString += `-description:lucene `
22     qString += `duration:>30`
23
24     q := bleve.NewQueryStringQuery(qString)
25     req := bleve.NewSearchRequest(q)
26     req.Highlight = bleve.NewHighlightWithStyle("html")
27     req.Fields = []string{"summary", "speaker", "description", "duration"}
28     res, err := index.Search(req)
29     if err != nil {
30         log.Fatal(err)
31     }
32     fmt.Println(res)
33 }
```

Run

Default Mapping vs Custom Mapping

The default mapping has worked really well, but...

```
18     q := bleve.NewTermQuery("haystack")
19     req := bleve.NewSearchRequest(q)
20     req.Highlight = bleve.NewHighlightWithStyle("html")
21     req.Fields = []string{"summary", "speaker"}
22     res, err := index.Search(req)
23     if err != nil {
24         log.Fatal(err)
25     }
26     fmt.Println(res)
```

Run

Earlier today we heard talk named **"Finding Bad Needles in Worldwide Haystacks"**.

Will we find it if we search for **"haystack"**?

Custom Mapping

```
27  enFieldMapping := bleve.NewTextFieldMapping()
28  enFieldMapping.Analyzer = "en"
29
30  eventMapping := bleve.NewDocumentMapping()
31  eventMapping.AddFieldMappingsAt("summary", enFieldMapping)
32  eventMapping.AddFieldMappingsAt("description", enFieldMapping)
33
34  kwFieldMapping := bleve.NewTextFieldMapping()
35  kwFieldMapping.Analyzer = "keyword"
36
37  eventMapping.AddFieldMappingsAt("url", kwFieldMapping)
38  eventMapping.AddFieldMappingsAt("category", kwFieldMapping)
39
40  mapping := bleve.NewIndexMapping()
41  mapping.DefaultMapping = eventMapping
42
43  index, err := bleve.New("custom.bleve", mapping)
44  if err != nil {
45      log.Fatal(err)
46  }
```

Run

Search Custom Mapping

```
18  q := bleve.NewTermQuery("haystack")
19  req := bleve.NewSearchRequest(q)
20  req.Highlight = bleve.NewHighlightWithStyle("html")
21  req.Fields = []string{"summary", "speaker"}
22  res, err := index.Search(req)
23  if err != nil {
24      log.Fatal(err)
25  }
26  fmt.Println(res)
```

Run

Analysis Wizard

http://analysis.blevesearch.com

[Watch a video introduction!](#)

Bleve Text Analysis Wizard

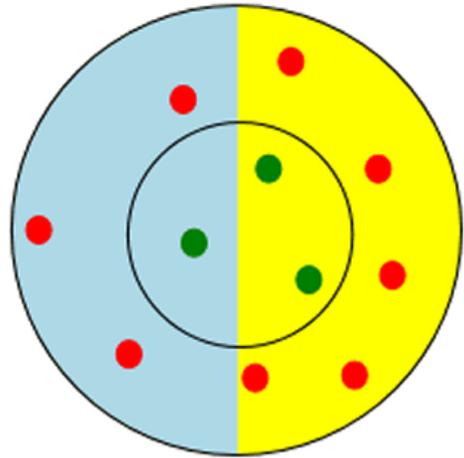

To get high quality search results, you must choose the right analyzer for your source text. To better understand how your text will be analyzed, try it out using the form below.

Analyzer

Text: haystacks

Position	Term	Start	End
1	haystack	0	9

Precision vs Recall

- Returned Results
- Not Returned Results
- Relevant Results
- Irrelevant Results

- Precision - are the returned results relevant?
- Recall - are the relevant results returned?

Faceted Search

```
11 func main() {
12
13     index, err := bleve.Open("custom.bleve")
14     if err != nil {
15         log.Fatal(err)
16     }
17
18     q := bleve.NewMatchAllQuery()
19     req := bleve.NewSearchRequest(q)
20     req.Size = 0
21     req.AddFacet("categories",
22         bleve.NewFacetRequest("category", 50))
23     res, err := index.Search(req)
24     if err != nil {
25         log.Fatal(err)
26     }
27     fmt.Println(res)
28 }
```

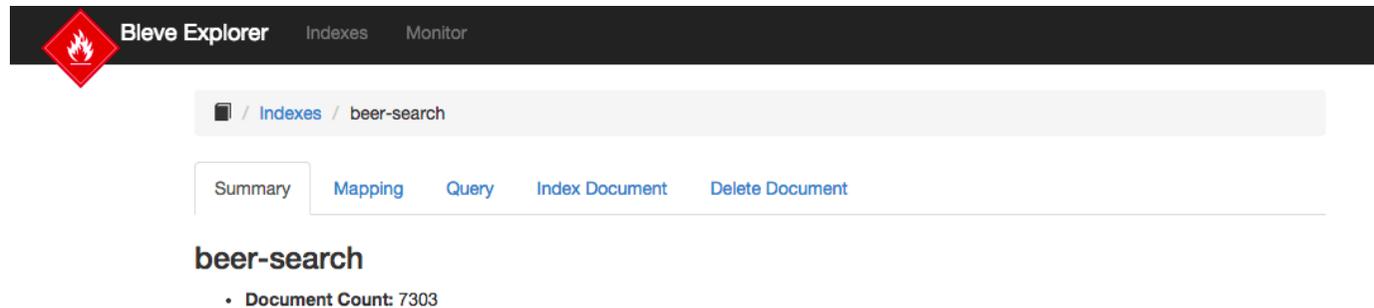

Run

Optional HTTP Handlers

```
import "github.com/blevesearch/bleve/http"
```

- All major bleve operations mapped
- Assume JSON document bodies
- See bleve-explorer sample app

```
https://github.com/blevesearch/bleve-explorer
```

The screenshot displays the Bleve Explorer web application interface. At the top, there is a dark navigation bar with the 'Bleve Explorer' logo (a red diamond with a white flame) and the text 'Bleve Explorer'. To the right of the logo are the links 'Indexes' and 'Monitor'. Below the navigation bar, a breadcrumb trail shows 'Indexes / beer-search'. A horizontal menu contains five items: 'Summary' (highlighted with a white border), 'Mapping', 'Query', 'Index Document', and 'Delete Document'. Below the menu, the page title is 'beer-search', followed by a bullet point indicating 'Document Count: 7303'.

Performance

Micro Benchmarks

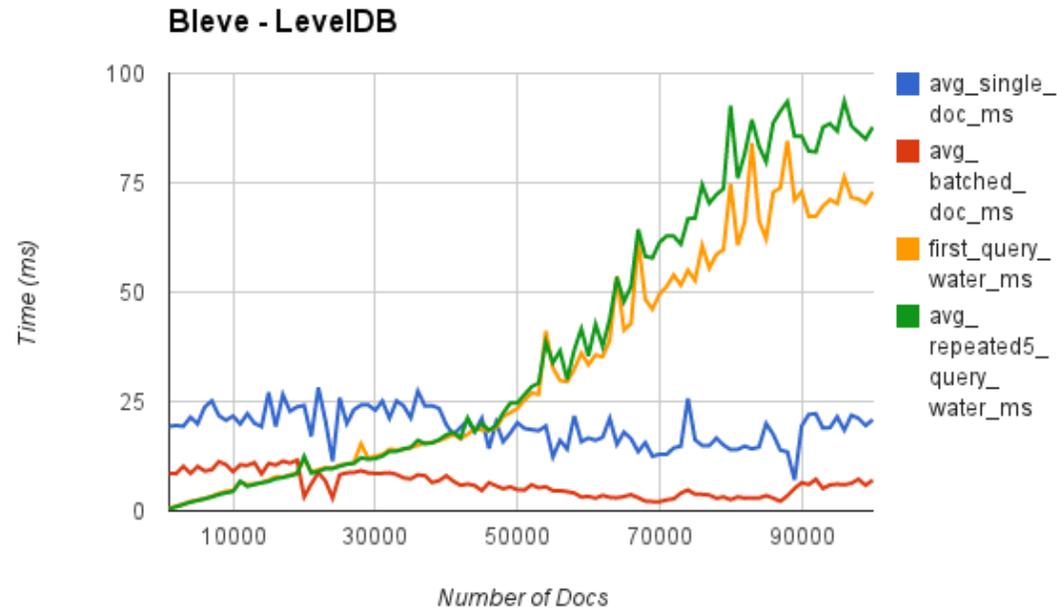

Use Go benchmarks to test/compare small units of functionality in isolation.

```
$ go test -bench=. -cpu=1,2,4
PASS
BenchmarkBoltDBIndexing1Workers      1000      3075988 ns/op
BenchmarkBoltDBIndexing1Workers-2    1000      4004125 ns/op
BenchmarkBoltDBIndexing1Workers-4     500      4470435 ns/op
BenchmarkBoltDBIndexing2Workers      500      3148049 ns/op
BenchmarkBoltDBIndexing2Workers-2    1000      3336268 ns/op
BenchmarkBoltDBIndexing2Workers-4    1000      3461157 ns/op
BenchmarkBoltDBIndexing4Workers      1000      3642691 ns/op
BenchmarkBoltDBIndexing4Workers-2     500      3130814 ns/op
BenchmarkBoltDBIndexing4Workers-4    1000      3312662 ns/op
BenchmarkBoltDBIndexing1Workers10Batch 1      1350916284 ns/op
BenchmarkBoltDBIndexing1Workers10Batch-2 1      1493538328 ns/op
BenchmarkBoltDBIndexing1Workers10Batch-4 1      1256294099 ns/op
BenchmarkBoltDBIndexing2Workers10Batch 1      1393491792 ns/op
BenchmarkBoltDBIndexing2Workers10Batch-2 1      1271605176 ns/op

Bleve Bench

Long(er) running test, index real text from Wikipedia. Measure stats periodically, compare across time.

- Does indexing performance degrade over time?
- How does search performance relate to number of matching documents?

Join the Community

The logo for freenode, featuring the word "freenode" in a lowercase, sans-serif font. The "free" part is in white and the "node" part is in a bright green color. The text is set against a dark grey rectangular background.

- #bleve is small/quiet room, talk to us real time

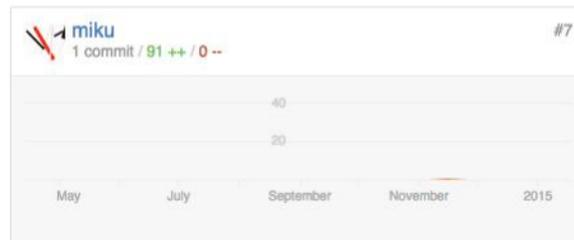

The logo for Google Groups, featuring the word "Google" in its multi-colored font followed by the word "groups" in a blue, lowercase, sans-serif font.

- Discuss your use-case
- Plan a feature implementation

GitHub

Contributors

Roadmap

- Result Sorting (other than score)
- Better Spell Suggest/Fuzzy Search
- Performance
- Prepare for 1.0 Release

Speaking

- GopherCon India February 2015 (Speaking)
- GopherCon July (Attending/Proposal to be Submitted)
- Your Conference/Meetup Here!

Thank you

Marty Schoch
